Thermal Interface Materials

DENKA

materials

for Thermal Solution

DENKA THERMALLY CONDUCTIVE SPACER

DENKA THERMALLY CONDUCTIVE SPACER is a "pad type" material. It has superior softness and is suitable for filling various gap sizes. It is recommended for portable base stations, digital gadgets, automotive and other applications.

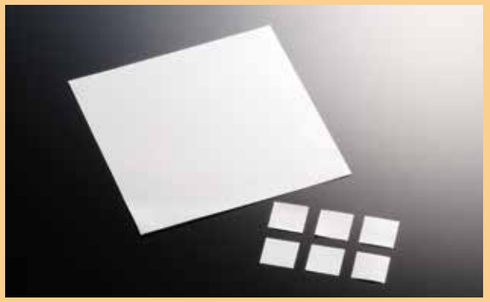
p.06
THERMALLY CONDUCTIVE SPACER

DENKA THERMALLY CONDUCTIVE GREASE

DENKA THERMALLY CONDUCTIVE GREASE can be applied flexibly. Customers can decrease thermal resistance by spreading our grease in a thin layer. Thermal Grease is highly prized in areas such as server systems and in automotive application.

p.14
THERMALLY CONDUCTIVE GREASE

DENKA THERMALLY CONDUCTIVE SHEET



DENKA THERMALLY CONDUCTIVE SHEET maintains its insulating properties throughout comprehensive testing, while also featuring ease in handling. It's suitable for automotive parts or electronic power supplies.

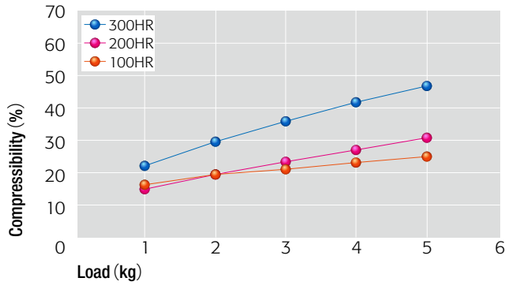
THERMALLY CONDUCTIVE SPACER DENKA FSL-HR

FSL-HR has highest thermal conductivity in our lineup, at 8W/mK.

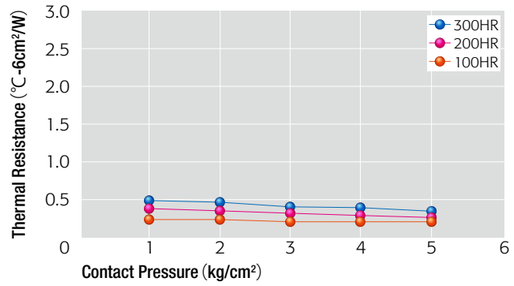
Product Characteristic

Product Data

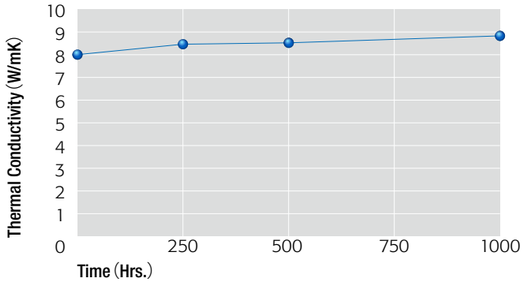
Load vs Compressibility

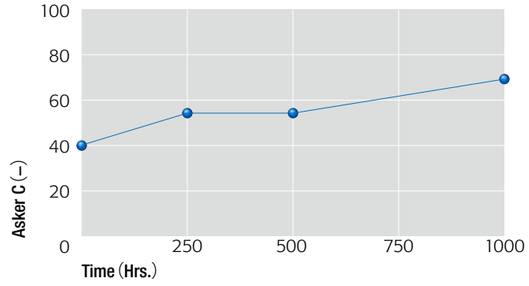


Contact Pressure vs Thermal Resistance

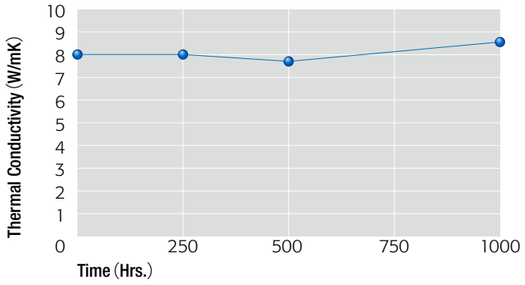


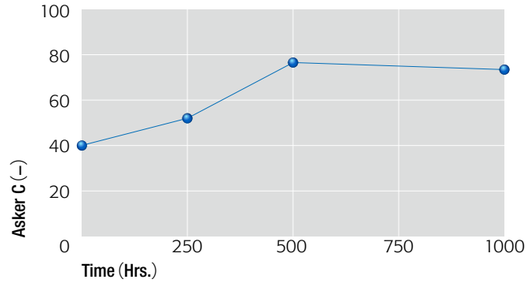
Heat-resistant reliability (100℃) *FSL100HR



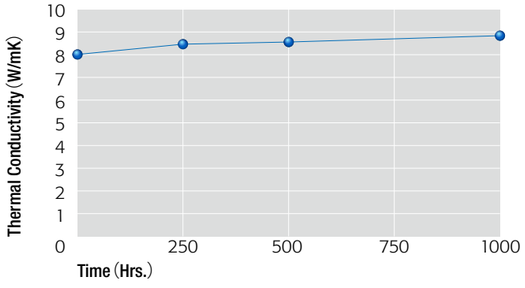


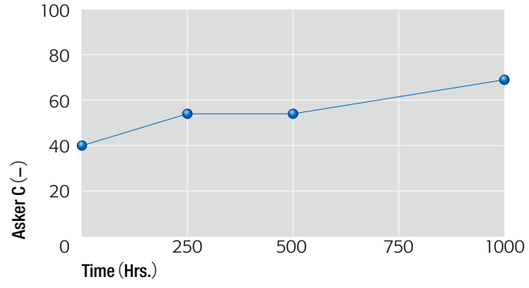
Heat-resistant reliability (125℃) *FSL100HR





Humidity-resistant reliability (85℃/85%) *FSL100HR





THERMALLY CONDUCTIVE SPACER
FSL-H

DENKA THERMALLY CONDUCTIVE SPACER FSL-H

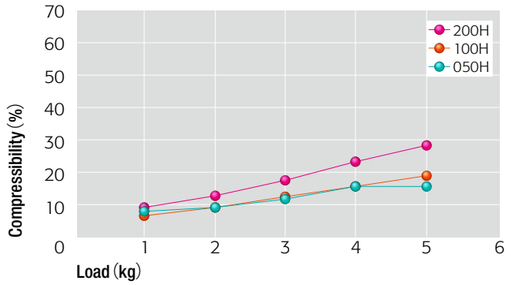
Thermal conductivity 5 W/mK

Product Characteristic

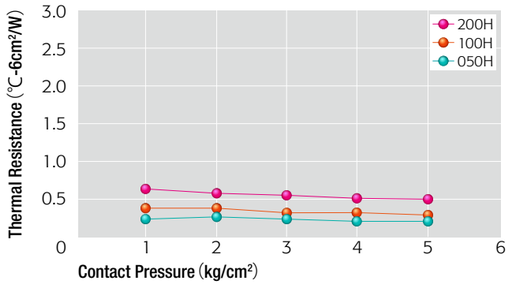
FSL-H features high thermal conductivity at 5W/mk, and also reverts to its original state after unloading.

Product Data

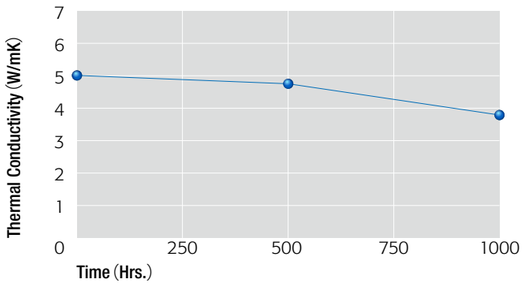
Load vs Compressibility

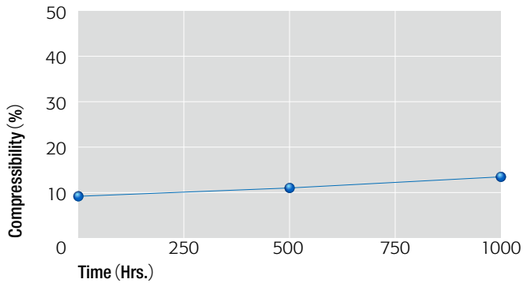


Contact Pressure vs Thermal Resistance

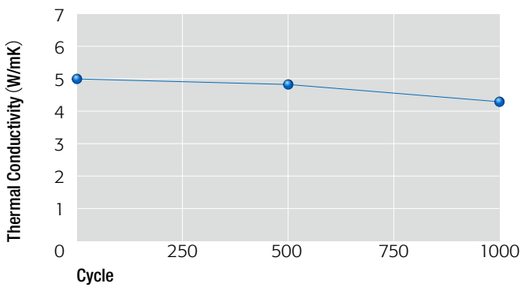


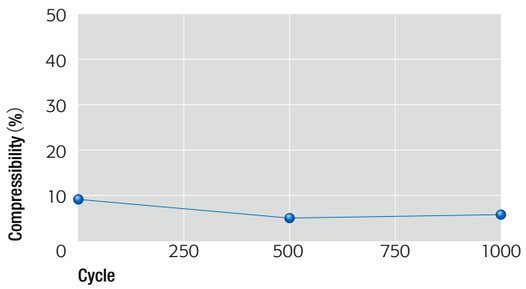
Heat-resistant reliability (150℃) *FSL100H



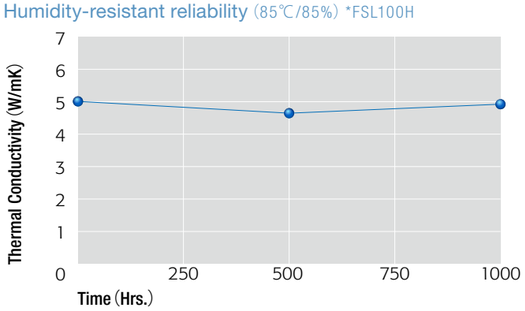


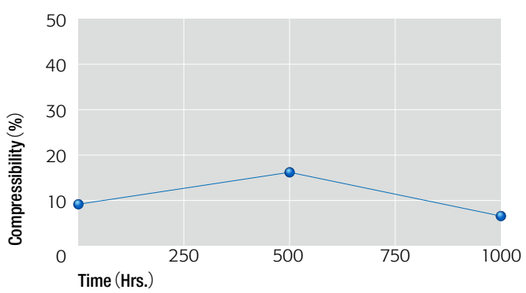
Heat-cycle resistant reliability (-40℃⇔+125℃) *FSL100H





Humidity-resistant reliability (85℃/85%) *FSL100H





Thermal conductivity 4 W/mK

THERMALLY CONDUCTIVE SPACER DENKA FSL-BH

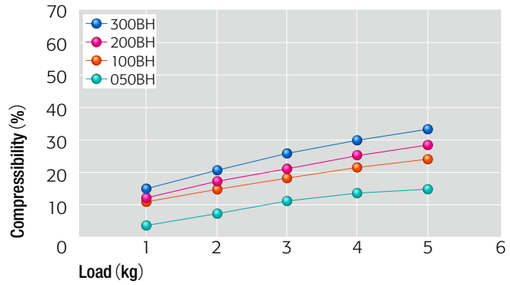
THERMALLY CONDUCTIVE SPACER
FSL-BH

Product Characteristic

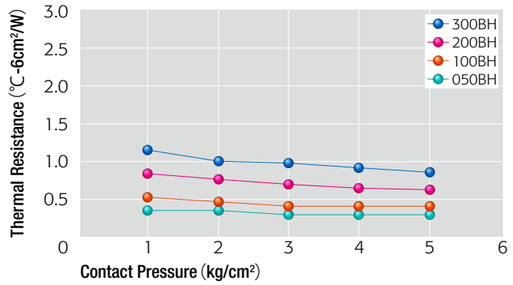
FSL-BH is harder than standard FSL-B grade, making it suitable for producing thicker pads.

Product Data

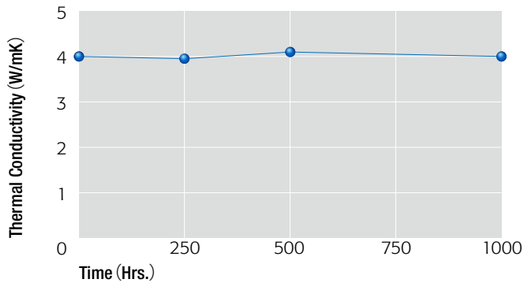
Load vs Compressibility

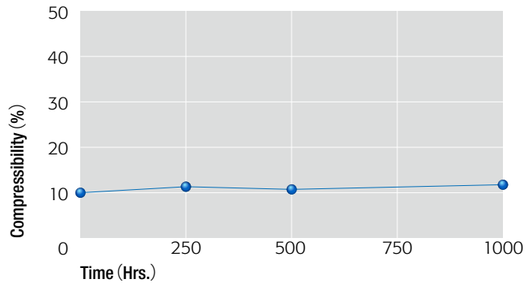


Contact Pressure vs Thermal Resistance

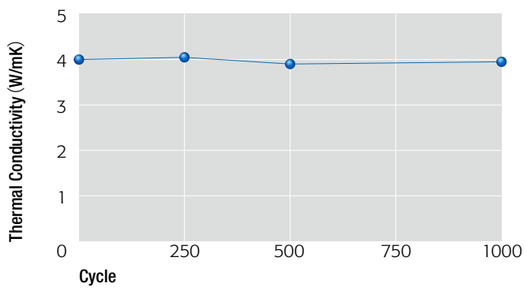


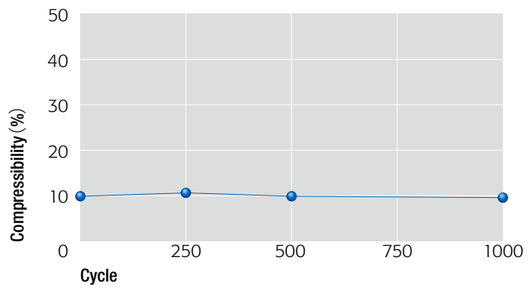
Heat-resistant reliability (150℃) *FSL100BH



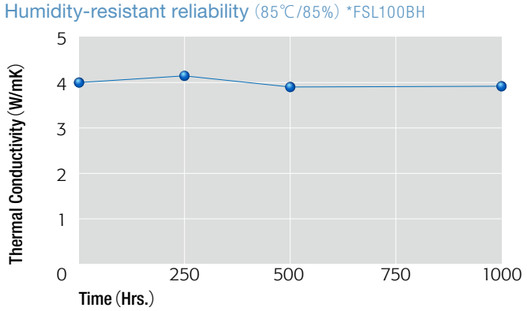


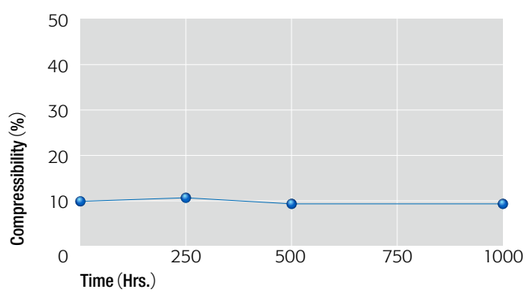
Heat-cycle resistant reliability (-40℃⇔+125℃) *FSL100BH





Humidity-resistant reliability (85℃/85%) *FSL100BH





THERMALLY CONDUCTIVE SPACER
FSL-B

DENKA THERMALLY CONDUCTIVE SPACER FSL-B

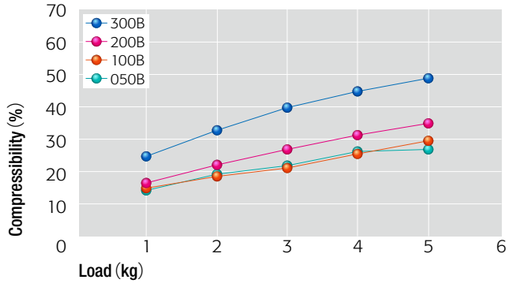
Thermal conductivity 4 W/mK

Product Characteristic

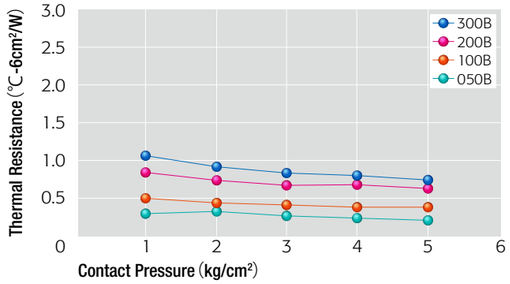
FSL-B is Denka's economy grade, featuring excellent balance between thermal conductivity and computability.

Product Data

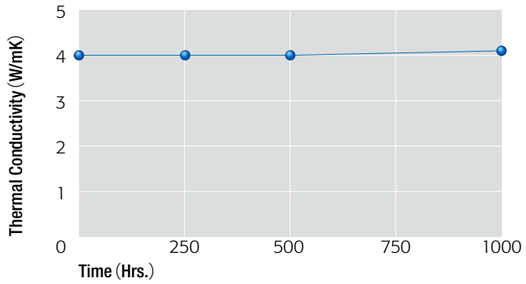
Load vs Compressibility

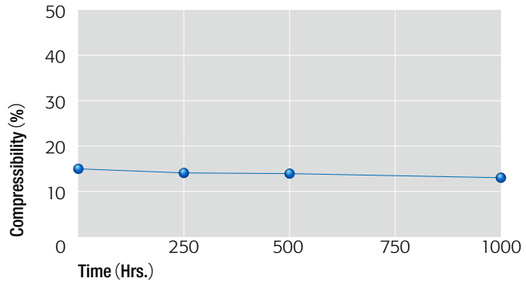


Contact Pressure vs Thermal Resistance

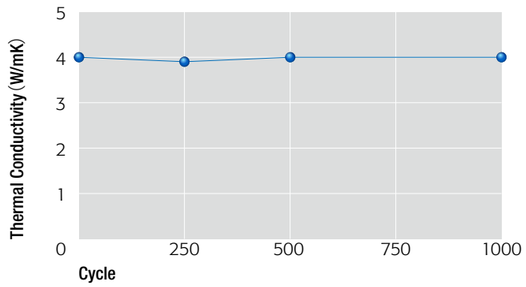


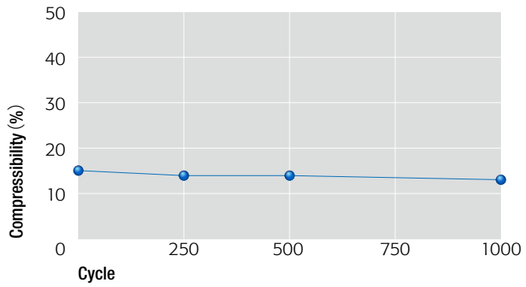
Heat-resistant reliability (150℃) *FSL100B



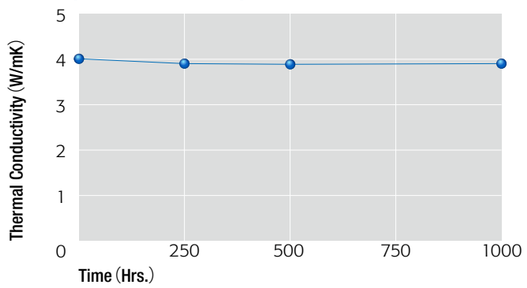


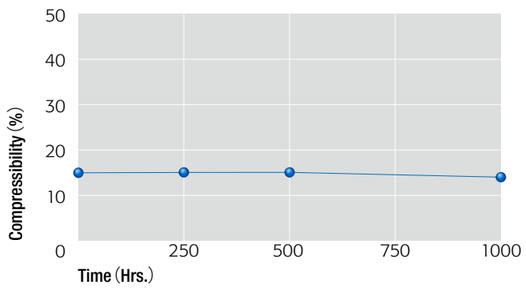
Heat-cycle resistant reliability (-40℃⇔+125℃) *FSL100B





Humidity-resistant reliability (85℃/85%) *FSL100B





3 W/mK Thermal conductivity

DENKA THERMALLY CONDUCTIVE SPACER FSL-D

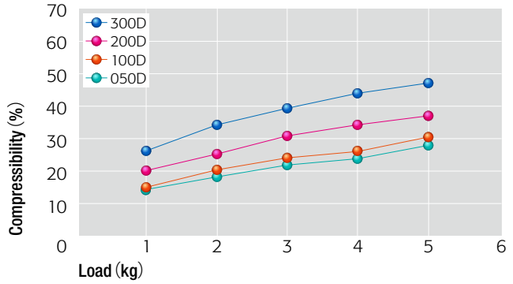
THERMALLY CONDUCTIVE SPACER
FSL-D

Product Characteristic

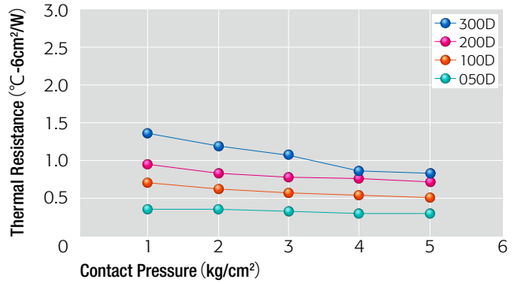
FSL-D contains less Low molecule siloxane and has high reliability.

Product Data

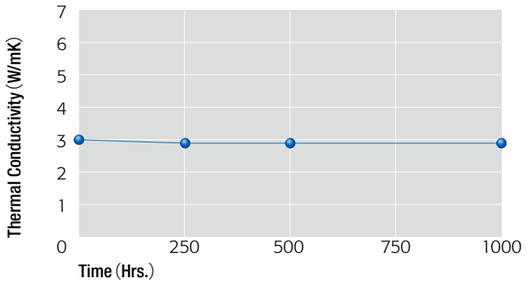
Load vs Compressibility

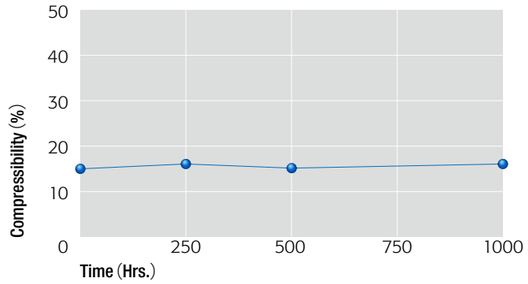


Contact Pressure vs Thermal Resistance

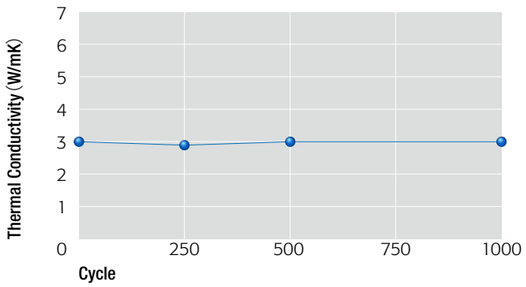


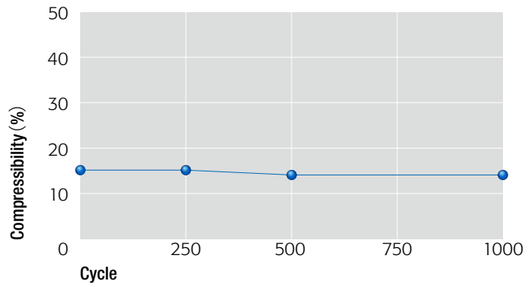
Heat-resistant reliability (150℃) *FSL100D



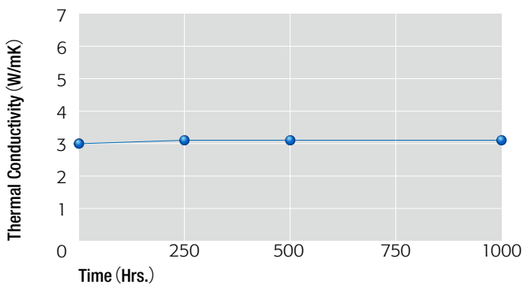


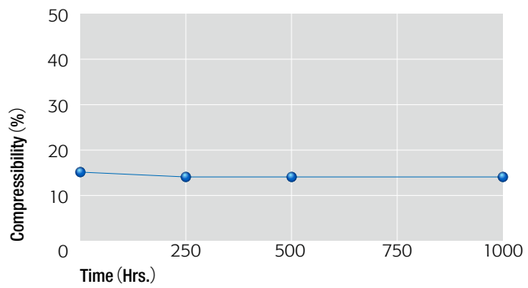
Heat-cycle resistant reliability (-40℃⇔+125℃) *FSL100D





Humidity-resistant reliability (85℃/85%) *FSL100D





THERMALLY CONDUCTIVE SPACER
FSL-BS

DENKA
THERMALLY CONDUCTIVE SPACER FSL-BS

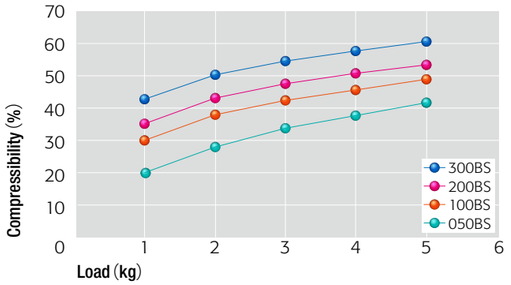
Thermal conductivity 3 W/mK

Product Characteristic

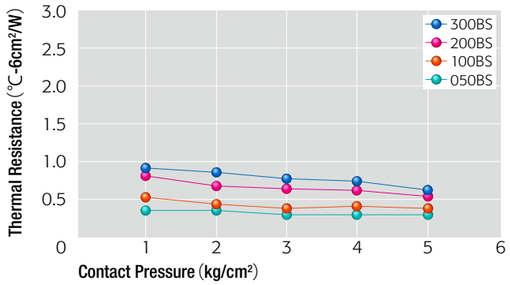
FSL-BS is the softest grade in our thermally conductive spacer lineup, with compressibility of 30%. It is recommended in applications which require both high thermal conductivity and compressibility, such as in portable base stations, and automotive.

Product Data

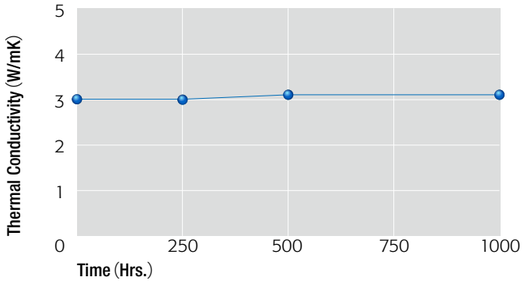
Load vs Compressibility

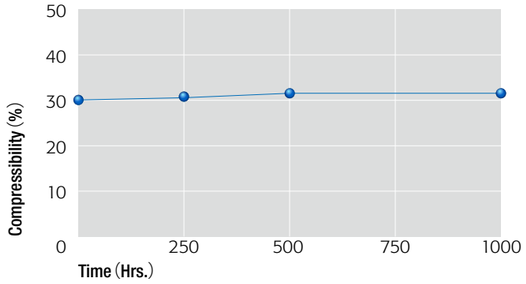


Contact Pressure vs Thermal Resistance

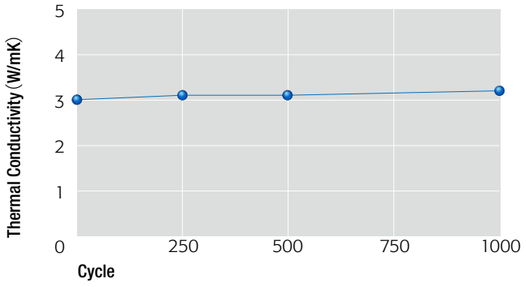


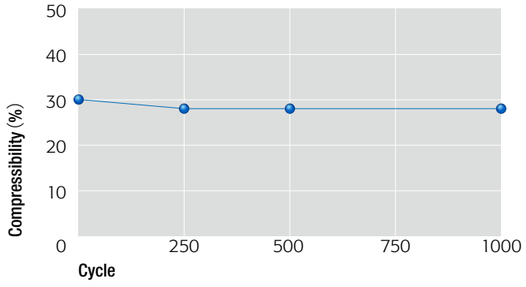
Heat-resistant reliability (150℃) *FSL100BS



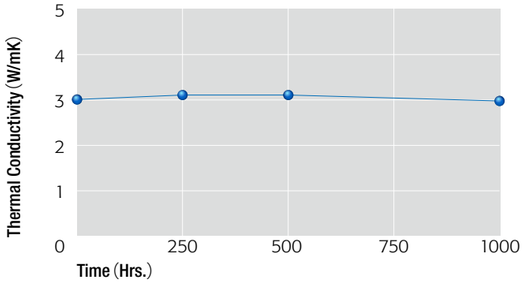


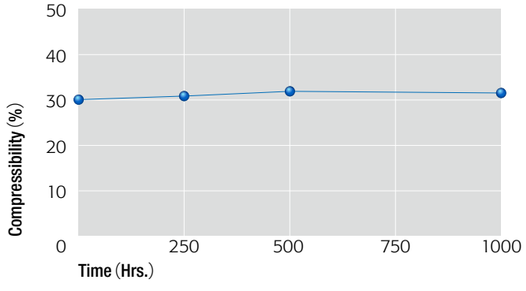
Heat-cycle resistant reliability (-40℃⇔+125℃) *FSL100BS





Humidity-resistant reliability (85℃/85%) *FSL100BS





2 W/mK Thermal conductivity

DENKA
THERMALLY CONDUCTIVE SPACER FSL-F3

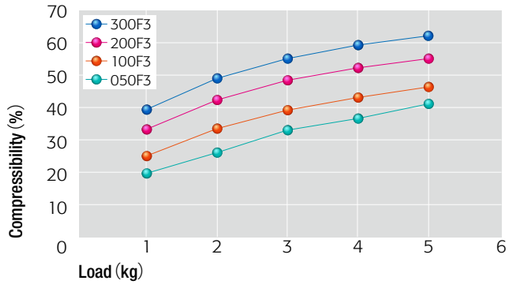
THERMALLY CONDUCTIVE SPACER
FSL-F3

Thermal conductivity of FSL-F3 is 2W/mK. It is utilized in gadgets such as automotive, and tablet PC's.

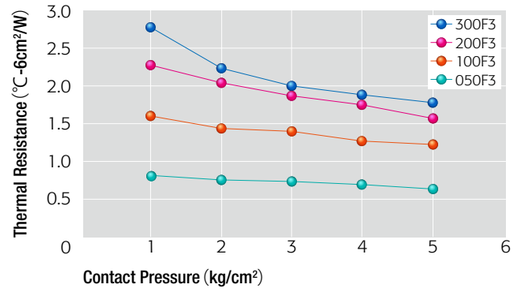
Product Characteristic

Product Data

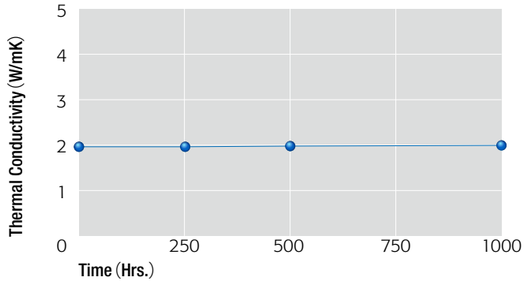
Load vs Compressibility

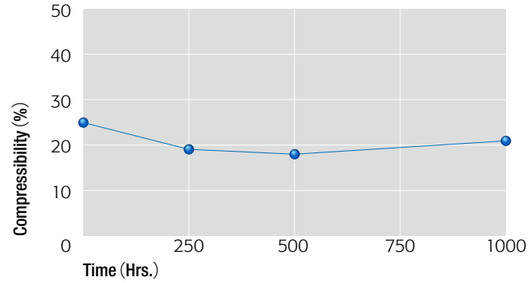


Contact Pressure vs Thermal Resistance

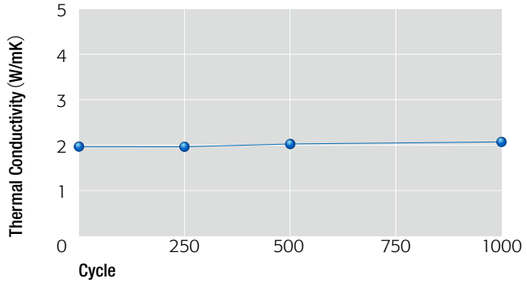


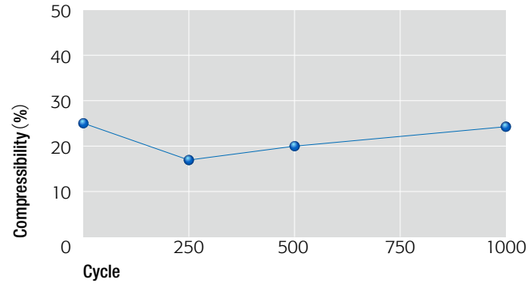
Heat-resistant reliability (150℃) *FSL100F3



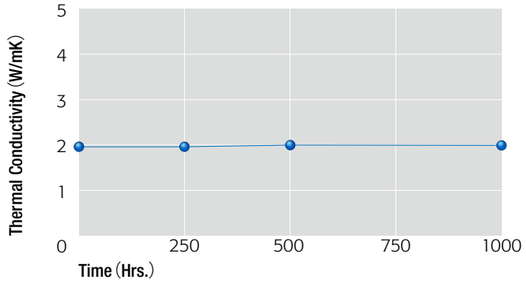


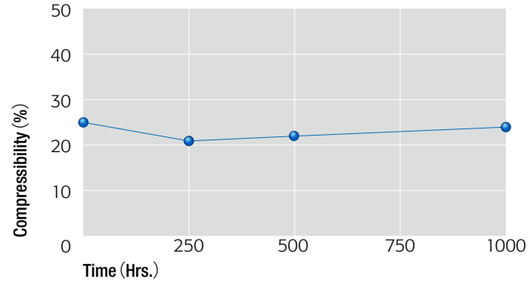
Heat-cycle resistant reliability (-40℃⇔+125℃) *FSL100F3





Humidity-resistant reliability (85℃/85%) *FSL100F3





THERMALLY CONDUCTIVE GREASE
TSG-W55
TSG-W80

DENKA
HIGH RELIABILITY ONE PART GREASE TSG-W55 / TSG-W80

Product Characteristic

TSG-W55, TSG-W80 is no need to cure, and it is difficult to cause falls, cracks, and oil bleed. High reliability and high thermal solution one part grease. Applicable to areas requiring long-term reliability.
Recommended for fields that require long-term reliability, such as in-vehicle and 5G base stations.

Slip test

Products	Test method	Dispensing thickness	500cycle	1,000cycle	3,000Cycle

DENKA
TWO PART THERMALLY CONDUCTIVE GREASE

THERMALLY CONDUCTIVE GREASE
GFC-R1
GFC-R55

Product Characteristic

It is a product that has the good points of grease and pad. Although it is liquid when applied, there is no concern about pump out because it hardens and becomes a pad-like shape.

DENKA
HIGH THERMALLY CONDUCTIVE SHEET BFG-C

Thermal conductivity 8 W/mK

BFG Series
BFG-C

Product Characteristic

BFG-C has excellent thermal conductivity(8W/m・K) and electrical insulation properties, so that it can be said to be ideal for heat dissipation material (TIM) used with semiconductors such as transistors, DCDC converters, OBC.
It also has excellent dielectric properties and is suitable for high-frequency communication applications such as 5G and ADAS.

DENKA
THERMALLY CONDUCTIVE SHEET BFG-A

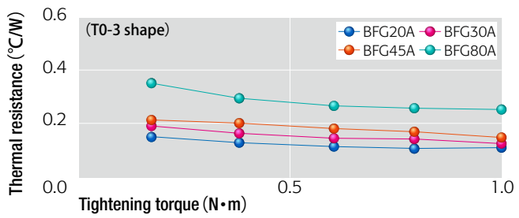
BFG Series
BFG-A

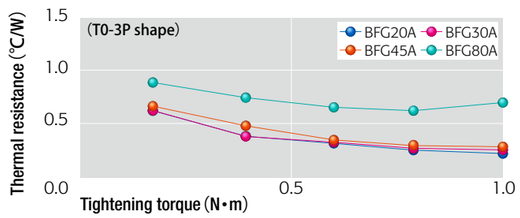
Product Characteristic

BFG-A is insulating heat conductive sheet with high thermal conductivity (5W/mK).

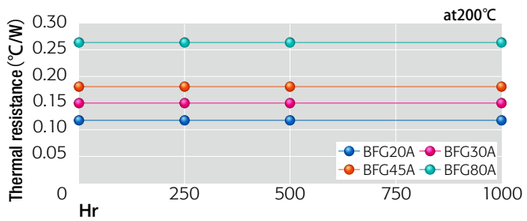
Product Data

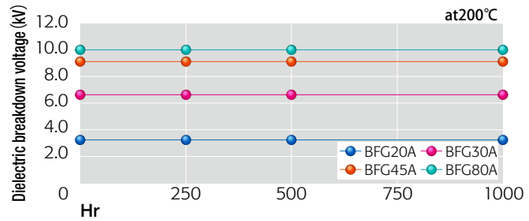
Relation between tightening torque and thermal resistance



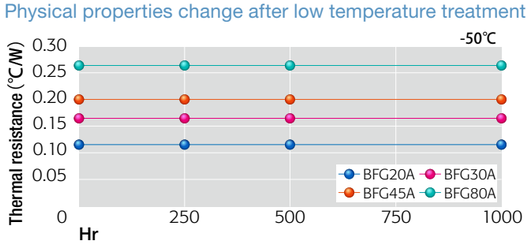


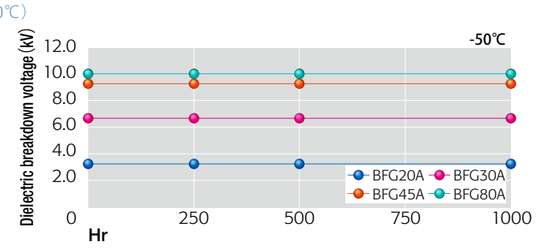
Physical properties change after high temperature treatment (200℃)



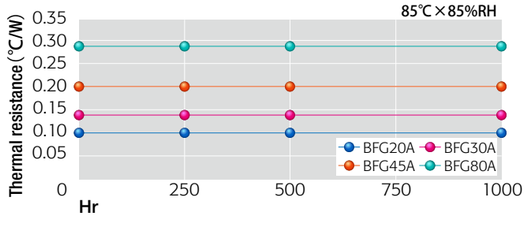


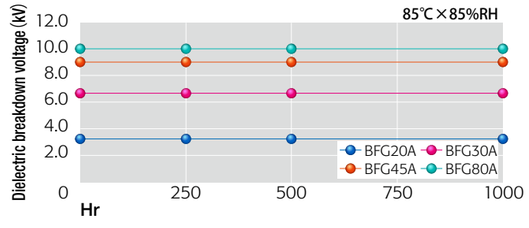
Physical properties change after low temperature treatment (-50℃)



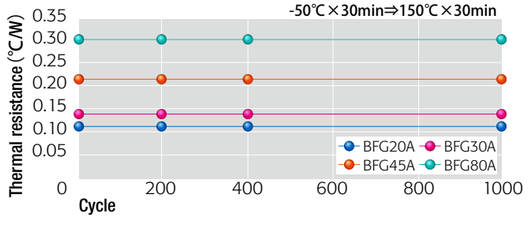


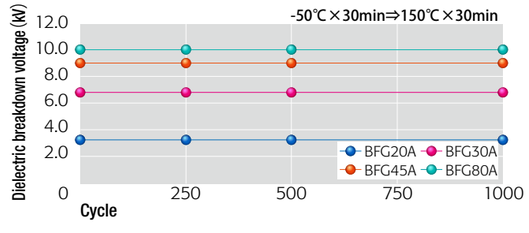
Physical properties change after 85℃×85%RH treatment





Physical properties change after heat cycle treatment (-50℃⇄150℃)





DENKA
THERMALLY CONDUCTIVE SHEET BFG

Thermal conductivity **4.1** W/mK

BFG Series

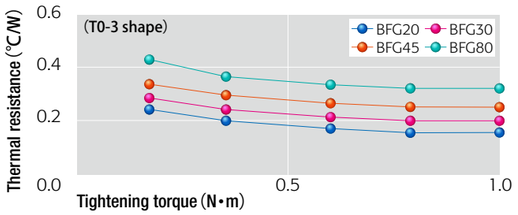
BFG

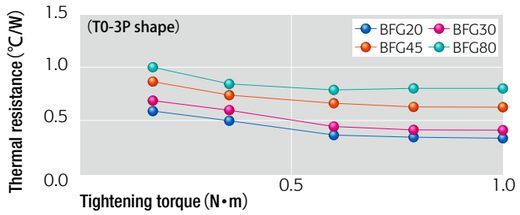
Product Characteristic

BFG grade is a sheet that has superior insulation & thermal conduction with a reinfocement layer (fiber glass). It is designed to support a number of applications.

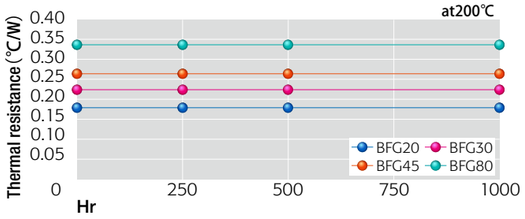
Product Data

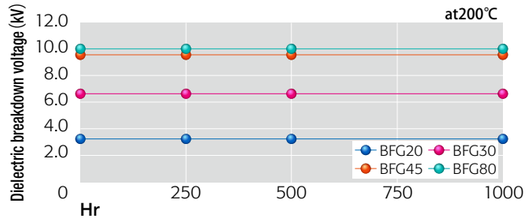
Relation between tightening torque and thermal resistance



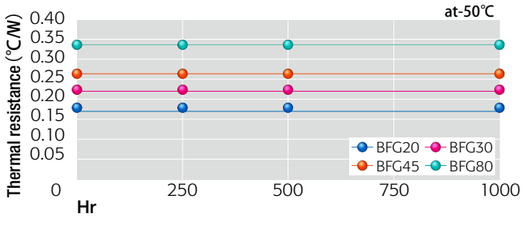


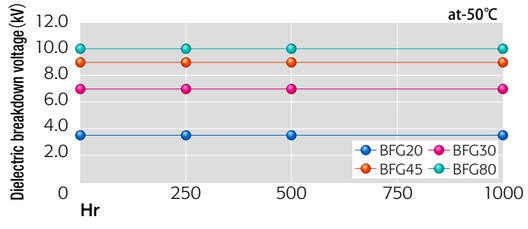
Physical properties change after high temperature treatment (200℃)



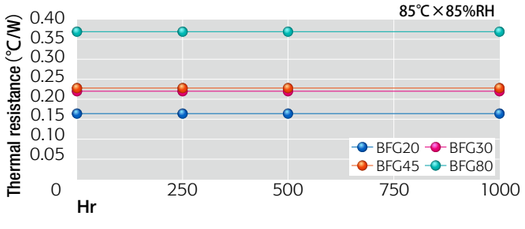


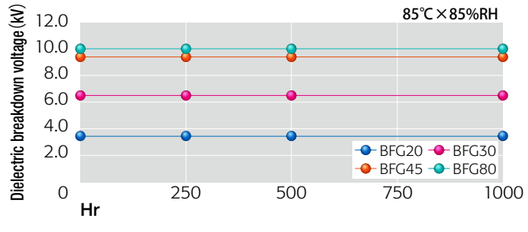
Physical properties change after low temperature treatment (-50℃)



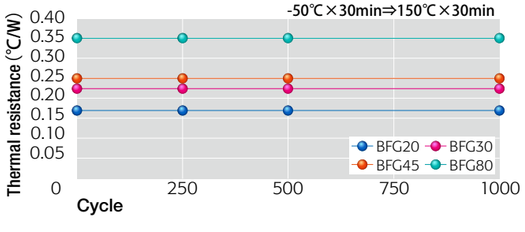


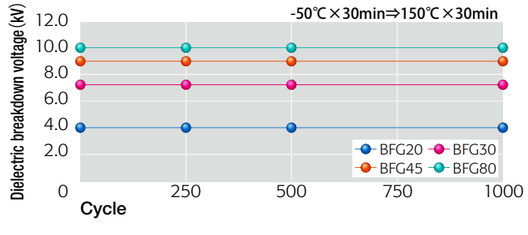
Physical properties change after 85℃×85%RH treatment



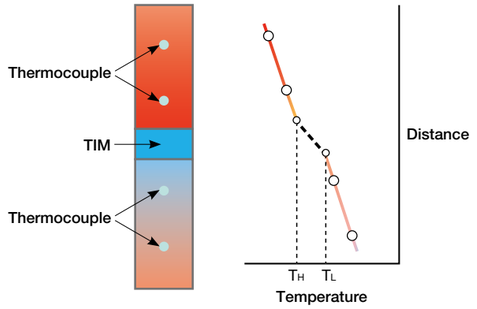


Physical properties change after heat cycle treatment (-50℃⇄150℃)





Method of determination for Thermal resistance (ASTM D5470)



After clipping TIM by Copper jig, heating up from upper side.
The relation between distance from lower copper and temperature is described as chart.
Thermal resistance can be calculated by TH and TL.

$$\text{Thermal resistance} = \frac{T_H - T_L}{\text{Heat flow ratio}} \qquad \text{Thermal conductivity} = \frac{\text{Thickness of TIM}}{\text{Thermal resistance} \times \text{dimension of TIM}}$$

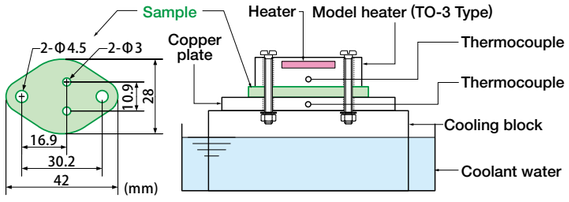
Method of determination for Thermal resistance

Thermal resistance of TO-3 Type (Product No. : B-1)

◆Test method (Denka method)

Clipped thermally conductive sheet between a model heater (TO-3 shape) and heatsink (Cu plate).
After tightened a torque and applied voltage as prescribed, thermal resistance is calculated from temperature difference between a model heater and a heatsink.

〈Outline dimensions of sample〉



[Test conditions]
Tightening torque : 0.5N・m (5.1kgf・m)
Applied voltage : 15W

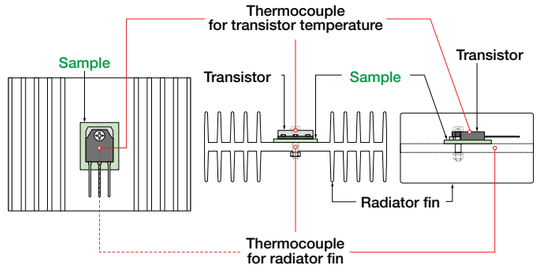
$$\text{Thermal resistance}\ (℃/W) = \frac{\text{Temperature of heater T1} - \text{Temperature of cooling block T2}}{\text{Applied voltage}\ (W)} + \text{Interface resistance}$$

$$\text{Thermal conductivity}\ (W/m\cdot k) = \frac{\text{Thickness}\ (m)}{\text{dimension}\ (m^2) \times \text{Thermal resistance}\ (℃/W)}$$

Thermal resistance after mounted (Product No. : D-1, D-3, D-6 etc.)

◆Test method (Denka method)

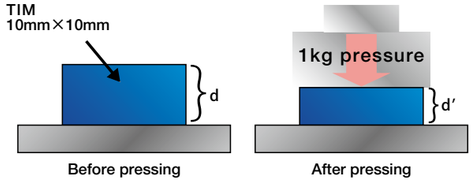
Clipped thermally conductive sheet between a transistor package (TO-3P, TO-3PL, TO-220 shape) and heatsink (Radiator fin).
After tightened a torque and applied electric pressure as prescribed, thermal resistance is calculated from temperature difference between a model heater and a heatsink.



$$\text{Thermal resistance}\ (℃/W) = \frac{\text{Temperature of transistor} - \text{Temperature of heatsink}}{\text{Applied voltage}\ (W)} + \text{Interface resistance}$$

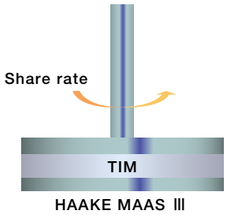
Though we used heatsink applied for ordinal electric power supply, we can change it and do remeasurement as customers' requirement.

Method of Compressibility

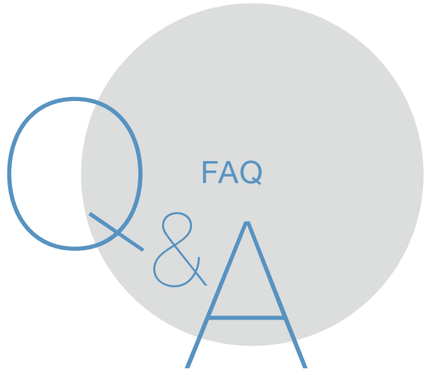


$$\text{Compressibility}(\%) = \frac{d - d'}{d} \times 100$$

Method of Viscosity



Measuring Viscosity when the rate of rotation is "d γ /dt=10" and the thickness of TIM is 0.3mm by using HAAKE MAASIII.



Q What kind of filler is Denka using?

A Denka utilizes inorganic fillers, such as BN and Al2O3, that we produce in-house.

Q What is the expiration date for DENKA TIM?

A 6 months after ETD date.

Q What are the points to remember when storing?

A Please keep away from direct daylight and preserve under room temperature.

Q Do DENKA TIM products contain environmentally hazardous substances?

A Denka does not intentionally utilize or include environmentally hazardous substances in TIM products.

Q What is the most suitable compressibility for DENKA THERMALLY CONDUCTIVE SPACER?

A We recommend 10%, but you can use by compressing over 10%.

Q Is there Non-adhesive type of DENKA THERMALLY CONDUCTIVE SPECER?

A Non-adhesive process can be applied only one side.

Q What is the thinnest thickness for expanding DENKA THERMALLY CONDUCTIVE GREASE?

A Please refer to the value of “BLT” in this catalog.

Q Is it possible to supply grease by syringe-type?

A Yes. Denka also supplies grease in syringe packaging.

Q What is the most recommended torque pressure of DENKA THERMALLY CONDUCTIVE SHEET?

A 5kg-cm.

Q What is the way to decrease thermal resistance of DENKA THERMALLY CONDUCTIVE SHEET?

A We recommend to increase contact between sheet and other materials, or by using grease.
